

-1" Crusher Run Gravel (Semi-Crushed)

- * Compactable; contains crushed and natural fines
- * Good road and driveway building material
- * We produce this product at: Collins, South Dayton

Item Description

Minus 1" Crusher Run Gravel is produced by processing bank run gravel through a crusher and reducing everything to 1 inch and smaller. The resulting material is a blend of natural and crushed product with more coarse aggregate than a typical screened gravel. The angularity of the crushed materials add to the stability of this material. It is very compactable and is ideal for constructing, surfacing and repairing gravel driveways and parking lots.
