- * Meets NYSDOT Sec. 304 Type 4 Subbase specifications
- * Good road and driveway building material
- * We produce this product at: Collins, Freedom, Great Valley, Hanover, South Dayton, Springville

Item Description

Minus 2" Crusher Run Gravel is produced by processing bank run gravel through a crusher and reducing everything to 2 inches and smaller. The resulting compactable material is a blend of natural and crushed product with more coarse aggregate than a typical screened gravel. The angularity of the crushed materials add to the stability of this material. -2" Crusher Run Gravel is a moderately priced subbase that works well for constructing driveways and parking lots.
